

# Surveillance Data Collection Analysis

Deborah Ellis, PhD, CIC

Excellencia University Infection Prevention Conference

1

---

---

---

---

---

---

---

---

## Objectives

- Surveillance
  - Types of Surveillance
  - Monitoring/Audits
- Regular and Ongoing Post-operative SSI Surveillance
- NHSN
- Audits and Checklists
  - Developing Audit Tools
  - Using Audit Tools
- Descriptive Statistics for determining trends and clusters
  - Using data to drive your IP program
- Components of a good action plan
  - Who
  - What
  - When
  - How
  - Measurable/Measures of Success

Excellencia University Infection Prevention Conference

2

---

---

---

---

---

---

---

---

## Background

“An observational survey of infection control practices in ambulatory surgical centers (ASCs) in 68 assessed ASCs found that two thirds of the centers had at least one lapse and nearly 18% had three or more gaps in five reviewed areas, of infection control practices.”

Urged for more active infection prevention activities at Ambulatory Surgical Centers.....

So, what's being done to address the issue?

Accessed 2/2019 [https://www.cdc.gov/ncidod/dhqp/nr/2018/08/ambulatory\\_surgical\\_centers.html](https://www.cdc.gov/ncidod/dhqp/nr/2018/08/ambulatory_surgical_centers.html)

Excellencia University Infection Prevention Conference

---

---

---

---

---

---

---

---

## CMS Move to action

- ▶ CMS requires all states to use the infection control audit tool and case tracer method for ASC inspections.
- ▶ ASCs cited for deficient practices are required to correct them
- ▶ ASCs that fail to correct serious deficiencies risk termination of their participation in Medicare.
- ▶ To assist ASCs in their self-evaluation, CMS has made the ASC infection control audit tool (available online)

Link to ASC Infection Control Surveyor Worksheet: [https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/som107\\_exhibit\\_351.pdf](https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/som107_exhibit_351.pdf)

Excellentia University Infection Prevention Conference

4

---

---

---

---

---

---

---

---

## Document, Document, Document

- ▶ If it's not documented, it didn't happen
- ▶ Random and periodic audits, documents level of compliance
- ▶ Separates suspicion vs reality
- ▶ Maintenance records
  - ▶ determine if equipment is periodically examined
  - ▶ determine whether the equipment is in good working order
  - ▶ determine whether environmental and sanitary requirements have been met.
- ▶ Having Policies and Procedures are not good enough
  - ▶ Determine if staff adhere to these policies and procedures
    - ▶ Safe injection practices
    - ▶ Properly sterilized or disinfection equipment

Excellentia University Infection Prevention Conference

5

---

---

---

---

---

---

---

---

## Audits/Monitoring Activities

- ▶ The ASC must conduct monitoring activities throughout the entire facility
  - ▶ Establish frequency (e.g. weekly, monthly, quarterly, semi-annually...etc.)
  - ▶ Identify infection risks
    - ▶ Focus on high risk, high volume, problem-prone areas
- ▶ Document its monitoring/tracking activities, including the measures selected for monitoring
- ▶ Activities should be conducted in accordance with recognized infection control surveillance practices
  - ▶ Those utilized by the CDC's National Healthcare Safety Net (NHSN)
  - ▶ Monitoring includes follow-up of patients after discharge, in order to gather evidence of whether they have developed an infection associated with their stay in the ASC.

Excellentia University Infection Prevention Conference

6

---

---

---

---

---

---

---

---

## AUDITS/Monitoring

Audits and Monitoring can be categorized into:

Outcome Measures:

- SSI rates
- Complication rates
- Wrong site Surgery Rates

Process of Care Indicators

- Hand Hygiene Rates
- Environmental Cleaning
- Use of PPE - AORN Surgical Attire
- Cleaning, disinfection and sterilizations
- Flu vaccine compliance
- Housekeeping checklist (AORN)
- Temperature and Humidity Logs
- Pre and post op room turn over procedures (AORN)

Excellentia University Infection Prevention Conference

7

---

---

---

---

---

---

---

---

## Same-Day Outcome Measures

- ▶ Patient Burn
- ▶ Patient Fall
- ▶ Wrong
  - ▶ Site
  - ▶ Side
  - ▶ Patient
  - ▶ Procedure
  - ▶ Implant
- ▶ All-Cause Hospital Transfer/Admission

Excellentia University Infection Prevention Conference

8

---

---

---

---

---

---

---

---

## SSI Surveillance - Post-op

- ▶ Should be a huge focus of ASCs
- ▶ It's an Outcome measure
- ▶ Can be Time consuming
- ▶ At ASC for one-day, long-term follow up with clinical record review difficult
- ▶ Patients do not always return if they have problems
  - ▶ ER
  - ▶ Hospitals
  - ▶ Clinics
  - ▶ PCP

Excellentia University Infection Prevention Conference

9

---

---

---

---

---

---

---

---

## National Healthcare Safety Network (NHSN)

- ▶ Gold Standard
  - ▶ Standard epidemiological definitions
  - ▶ Eliminates "my patient's are sicker"
- ▶ Participation in CMS Quality Reporting Programs
- ▶ Obtain baseline HAI rates
- ▶ Compare rates to national data
- ▶ Allows for participating in state or national HAI prevention collaboratives
- ▶ Feedback of appropriate data to surgeons effective component of SSI reduction strategies

Excellentia University Infection Prevention Conference

10

---

---

---

---

---

---

---

---

## Pros and Cons to NHSN SSI Surveillance

- ▶ Not mandatory...YET! (currently 4 states require ASC reporting)
- ▶ 2018 NHSN criteria for SSIs already defined
- ▶ Toolkits available - you don't have to reinvent the wheel
- ▶ Training available online
- ▶ Robust information - aggregated data
- ▶ Enroll in NHSN
  - ▶ Map and set up reporting plan
- ▶ Annual Facility Survey
- ▶ Determine surgical procedures to follow
  - ▶ Check out state requirements (e.g. CA follows 24 procedures)
- ▶ Select post operative procedure codes
  - ▶ In plan
  - ▶ Out plan
- ▶ NHSN heavily microbiology lab report driven
  - ▶ No micro/mould culture results available
- ▶ 2018 SSI Criteria
  - ▶ Superficial (30 days)
  - ▶ Deep Incisional (30-90 days)
  - ▶ Organ/space (30-90days)

Excellentia University Infection Prevention Conference

11

---

---

---

---

---

---

---

---

## Need Help Setting Up NHSN

- ▶ Check with State HAI section
  - ▶ All states have an HAI section
- ▶ Check for local
  - ▶ Health Services Advisory Group (HSAG)
  - ▶ Hospital Quality Institute (HQI)
  - ▶ Hospital Improvement Innovation Network (HIIN)

Excellentia University Infection Prevention Conference

12

---

---

---

---

---

---

---

---

Be Creative with post op data collection strategies

- Rely on sending monthly letters to physicians
  - Back office staff
- Post-op clinic visits
- Post-op surveys
  - Phone calls - (30-90 days post-op)
- Email
- Connection with PCP back office staff
- Build relationships with other infection preventionist
  - APIC chapter meetings
  - Home Health Services
  - Wound status
  - Change in antibiotics
- Possibly even PT/OT services
- Onboarding of surgeons - NHSN education on SSI

13

---

---

---

---

---

---

---

Audits/Monitoring

- Meaningful use
  - Don't just measure to measure (counting beans)
    - What are you measuring and why?
    - Aggregate the data (benchmark and trending)
  - Interpret the data
    - Who needs to know this information?
- Be a part of a (Quality Assurance/Performance Improvement) QAPI program
  - Five Elements of a QAPI Program
    - Design and Scope
    - Governance and Leadership
    - Feedback, Data System and Monitoring
    - Use data for Performance Improvement Projects
    - Systematic Analysis and Systemic Action

Excellentia University Infection Prevention Conference

14

---

---

---

---

---

---

---

Types of Monitoring Tools

- Internet is filled with monitoring tools for almost any infection control processes
- CDC monitoring tools
  - State HAI section monitoring tools
  - APIC monitoring tools
  - ASC monitoring tools
  - Assessment Tools

Excellentia University Infection Prevention Conference

15

---

---

---

---

---

---

---

## All this data

19

---

---

---

---

---

---

---

---

## How to use data?

- ▶ Tracking and trending
- ▶ Benchmarking and comparing
- ▶ Improving Performance
- ▶ Mandatory reporting

Excellentia University Infection Prevention Conference

20

---

---

---

---

---

---

---

---

## Analyzing

- ▶ Incidence - How frequently it occurs
- ▶ Prevalence - How widespread in a given point in time
- ▶ Rates
  - ▶ Numerator
  - ▶ Denominator
  - ▶ Multiplier (to give you a whole number)

<b>prev</b> ALence	=	<b>ALL cases</b>
		<b>Population @ risk</b>
<b>i</b> ncidence	=	<b>New cases</b>
		<b>Population @ risk</b>

---

---

Measures of Central Tendency

- Mean: mathematical overage of the values in a data set.
- Calculation:

Patient Length of Stay: 12, 9, 3, 5, 7, 6, 13, 8, 4, 15, 6

Mean (x) =  $\frac{\text{The sum of each patient's length of stay}}{\text{The number of patients}}$

$$= \frac{12 + 9 + 3 + 5 + 7 + 6 + 13 + 8 + 4 + 15 + 6}{11} = \frac{88}{11} = 8 \text{ days}$$

Excellentia University Infection Prevention Conference

---

---

---

---

Measures of Central Tendency

Excellentia University Infection Prevention Conference

24

---

---

---

---

---

---

---

---

## Measures of Central Tendency

► **Median:** the value falling in the *middle* of the data set.

► Calculation:

**Patient Length of Stay:** 12, 9, 3, 5, 7, 6, 13, 8, 4, 15, 6

**Median** = 3, 4, 5, 6, 6, **7**, 8, 9, 12, 13, 15 = 7 days

Excellentia University Infection Prevention Conference

25

---

---

---

---

---

---

---

---

## Measures of Central Tendency

► **Mode:** the *most frequently occurring* value in a data set.

► Calculation:

**Patient Length of Stay:** 12, 9, 3, 5, 7, 6, 13, 8, 4, 15, 6

**Mode** = 3, 4, 5, **6**, **6**, 7, 8, 9, 12, 13, 15 = 6 days

Excellentia University Infection Prevention Conference

26

---

---

---

---

---

---

---

---

## Measures of Dispersion

► **Standard Deviation:** measure of dispersion that reflects the variability in values around the mean.

► **Deviation:** the difference between an individual data point and the mean value for the data set.

►  $SD = \sqrt{\sum (X - \bar{X})^2 / n - 1}$

► "Take all the deviations from the mean, square them, then divide their sum by the total number of observations minus one and take the square root of the resulting number"

► **Variance:** a measure of variability that is equal to the square of the standard deviation.

Excellentia University Infection Prevention Conference

27

---

---

---

---

---

---

---

---

## The Math

- Determine what you're going to measure
- Define what you're going to measure
- Determine how are you going to measure it?
  - Must have numerator (defined)
  - Must have denominator (population)
  - Must have multiplier to get rates
  - Rates - in healthcare, rates are often used to measure an event over time used as performance improvement measures

$$\text{Infection rate} = \frac{\left[ \frac{\text{Total number of nosocomial infections for nosocomia}}{\text{Total number of discharges (including deaths) for nosocomia}} \right] \times 100}{\frac{3 \times 100}{123}} = \frac{123}{123} = 2.44\%$$

Excellencia University Infection Prevention Conference

28

---

---

---

---

---

---

---

---

## Useful to know

### Inferential statistics

- Parametric vs non- parametric
- Hypothesis testing
  - Null vs Alternate Hypothesis
  - Types of Errors (Type I-II)

### NHSN

- Inferential statistics
- Statistic Model is Regression Analysis
- Weighted Risk Factors
- SIR calculated as a ratio Observed/Predicted

Excellencia University Infection Prevention Conference

29

---

---

---

---

---

---

---

---

## AND REPRESENTING DATA

## How to present the data

Excellencia University Infection Prevention Conference

30

---

---

---

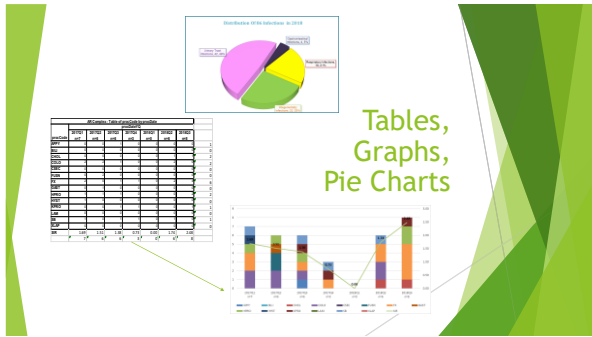

---

---

---

---

---

31

---

---

---

---

---

---

---

---

### Run charts vs control charts

- ▶ Run chart - patterns over time
  - ▶ Easily spot trending (upwards or downwards)
- ▶ Control chart single line of data over time, but includes upper and lower limits
  - ▶ Can be used to set benchmarks in absence of national standard

Excellentia University Infection Prevention Conference

32

---

---

---

---

---

---

---

---

### What story do you want to tell?

- ▶ OR Room Temps and Humidity
- ▶ Great Log, but what does it tell me?

OR Room Temperature and Humidity Log - 10/1/2017									
Room	Temp (°F)	Humidity (%)	Temp (°F)	Humidity (%)	Temp (°F)	Humidity (%)	Temp (°F)	Humidity (%)	Notes
OR 1	72.5	45	73.0	48	72.0	42	73.5	50	Temp stable, humidity slightly low.
OR 2	71.0	40	71.5	42	70.5	38	72.0	45	Humidity low, consider humidifier.
OR 3	73.0	50	73.5	52	72.5	48	74.0	55	Temp and humidity within range.
OR 4	70.0	35	70.5	38	69.5	32	71.0	40	Temp low, humidity very low.
OR 5	74.0	55	74.5	58	73.5	52	75.0	60	Temp high, humidity high.
OR 6	71.5	45	72.0	48	71.0	42	72.5	50	Temp stable, humidity stable.
OR 7	72.0	48	72.5	50	71.5	45	73.0	52	Temp stable, humidity stable.
OR 8	73.0	50	73.5	52	72.5	48	74.0	55	Temp stable, humidity stable.
OR 9	71.0	40	71.5	42	70.5	38	72.0	45	Humidity low, consider humidifier.
OR 10	74.0	55	74.5	58	73.5	52	75.0	60	Temp high, humidity high.

Action Plans/Infection Control Plans

Category	Subcategory	Item	Value	Unit	Target
Surgical Site Infection (SSI)	Rate	Overall SSI Rate	1.2	%	1.0
		Cardiothoracic SSI Rate	2.5	%	2.0
		General Surgery SSI Rate	1.8	%	1.5
		Orthopedic SSI Rate	1.5	%	1.2
		Urology SSI Rate	1.0	%	0.8
		Gynecology SSI Rate	0.8	%	0.6
		Neurology SSI Rate	0.5	%	0.4
		ENT SSI Rate	0.3	%	0.2
		Ophthalmology SSI Rate	0.1	%	0.1
		Podiatry SSI Rate	0.2	%	0.1
Central Line-Associated Bloodstream Infection (CLABSI)	Rate	Overall CLABSI Rate	0.5	/1000 catheter days	0.4
		ICU CLABSI Rate	0.8	/1000 catheter days	0.6
		Medical/Surgical CLABSI Rate	0.3	/1000 catheter days	0.2
		Neonatal CLABSI Rate	0.2	/1000 catheter days	0.1
		Transplant CLABSI Rate	0.4	/1000 catheter days	0.3
		Cardiac CLABSI Rate	0.6	/1000 catheter days	0.5
		Respiratory CLABSI Rate	0.5	/1000 catheter days	0.4
		Renal CLABSI Rate	0.4	/1000 catheter days	0.3
		GI CLABSI Rate	0.3	/1000 catheter days	0.2
		Other CLABSI Rate	0.2	/1000 catheter days	0.1
Ventilator-Associated Pneumonia (VAP)	Rate	Overall VAP Rate	0.3	/1000 ventilator days	0.2
		ICU VAP Rate	0.4	/1000 ventilator days	0.3
		Medical/Surgical VAP Rate	0.2	/1000 ventilator days	0.1
		Neonatal VAP Rate	0.1	/1000 ventilator days	0.05
		Transplant VAP Rate	0.3	/1000 ventilator days	0.2
		Cardiac VAP Rate	0.4	/1000 ventilator days	0.3
		Respiratory VAP Rate	0.3	/1000 ventilator days	0.2
		Renal VAP Rate	0.2	/1000 ventilator days	0.1
		GI VAP Rate	0.1	/1000 ventilator days	0.05
		Other VAP Rate	0.1	/1000 ventilator days	0.05

Goal 2018	Program Initiatives	Planned Actions for 2018:
Reduce and eliminate SSI	High for PR and COLD	<ul style="list-style-type: none"><li>Continue surveillance of the same procedures from previous year</li><li>Continue utilizing CDC, SHEA and APIC Guidelines for Prevention of SSI</li><li>Work with ORTMO on pre-op order sets to include MRSA screening and decolonization, weight based dosing of abx.</li></ul>
Zero SSI infections, and/or SSI national benchmark: zero infections or reduce rate from 2017	Medium for all other procedure types	<ul style="list-style-type: none"><li>Continue education to physicians and staff as needed</li><li>Discuss with relevant committees further SSI prevention initiatives to include:<ul style="list-style-type: none"><li>OR Traffic Control</li><li>Enforce AORN Surgical Attire</li><li>CRS wound irrigation</li><li>Enhance AORN guidelines for point-of-use pre-cleaning</li></ul></li><li>Continue use of UV light as part of terminal/end-of-day cleaning and disinfection of the OR</li></ul>

38

---

---

---

---

---

---

---

---

Summary

- Analyze collected data
- Use data to identify trends
- Use trends to develop an action plan (Infection Prevention Plan)
- Present data summary to healthcare workers and leadership
- Present action plan to healthcare workers and leadership
- Periodically review action plan to determine its effectiveness

Excellentia University Infection Prevention Conference

39

---

---

---

---

---

---

---

---

## Example Question

- In a Control Chart, the central line represents the:
- Average of data points.
  - Time period
  - Count/rate
  - Lower limit of data

Answer: In a control chart the central line represents the average of the data points. The x-axis represents the time period used (days, months, years...) while the y-axis represents the rate or count and the data points represent the actual values. Additionally, there may be an upper control limit, a line representing +2 SD, and a lower control limit a line representing -2 SD from the mean.

Excellentia University Infection Prevention Conference

40

---

---

---

---

---

---

---

---

## Sample Question

- Using the data presented below regarding surgical site infections (SSIs):

Quarter	SSIs	Volume
1st	2	350 cases
2nd	1	320 cases
3rd	1	300 cases
4th	2	400 cases

Which quarter would have the highest SSI rate?

- A. 1st
- B. 2nd
- C. 3rd
- D. 4th

Answer: A. 1<sup>st</sup> Numerator (SSI Event)/Denominator (volume of cases) x 100

Excellentia University Infection Prevention Conference

41

---

---

---

---

---

---

---

---

## Sample Question

Monthly Surgical Site Infection Rate following Knee Replacement, 01/01/2007 - 31/12/2007

Study the SPC to the left, is this ASC experiencing an issue with SSIs?

- Answer: No
1. Any point above the UCL, or below the LCL.
  2. One of five points above +2 SD or below -2 SD.
  3. Four of five points above +1 SD or below -1 SD.
  4. Eight consecutive points above or below the CL.
  5. Six consecutive points increasing or decreasing.
  6. Fifteen consecutive points between +1 SD and -1 SD.
  7. Fourteen consecutive points alternating up and down.
  8. Eight consecutive points above +1 SD and/or below -1 SD.

Excellentia University Infection Prevention Conference

42

---

---

---

---

---

---

---

---

## Sample Question

► Identify the median in the following list of numbers:  
6, 2, 9, 7, 1, 4

- A. 9
- B. 7
- C. 5
- D. 4

Answer: C The median of a data set is the number that is 50 percent of values fall below and 50 percent of values fall above. The data here are not presented in numerical order, so first they must be ordered from lowest to highest. Then is an even number of values in its set, so to find the median one must identify the two central numbers and then average them. So  $4 + 6 = 10 \div 2 = 5$
